

CASE STUDY

Towards a greener industry: Kenvue takes action for the environment in Sézanne

Background:

Kenvue, one of the world's largest consumer healthcare companies, has deployed a ground-mounted PV power plant at its production site in Sézanne (51), as part of its strategy to reduce carbon emissions. The company has committed to reducing its greenhouse gas emissions by 42% by 2030, while building resilience and energy independence for their factories.

Challenge:

Kenvue is already supplied with 100% electricity from renewable energy sources through an EMEA Power Purchase Agreement (vPPA). But they wanted to take their ecological transition and energy independence to the next level. With the installation of over 3,000 solar panels, the company can now cover 22% of its site's annual energy consumption.

Solution:

The GoodWe 250K-HT series inverter was the ideal choice for the installation. It is ideally equipped for the high-power 570Wp modules by supporting up to 20A maximum input current per string. With 12 MPPT-Trackers, the string-inverter optimizes power generation and lowers LCOE for clients. String level monitoring allows for observation of the solar plant for smart and proactive maintenance. GoodWe provided on-site support for flawless commissioning.

Installation details

Location: 51120 Sézanne, France
Capacity: 1.7 MWP
Yearly production: 1.850 MWh
Installation Date: TBA
Type of Installation: Ground-PV
Inverters: GoodWe 250K-HT

Environmental Impact:

GoodWe is practicing environmental and social responsibility throughout the lifetime of their products. This begins with the sourcing of materials and components, extends through production and logistics and doesn't end until the product's end of life. Progress in the area of ESG (Environment, Social, Governance) can be tracked via the sustainability report, which has been published annually since 2022, as well as publications on the numerous actions taken. These include the establishment of the corporate Institute for Sustainable Development and Research, and the opening of the new green energy headquarters in Suzhou, China. GoodWe's CSR performance has been recognized by several assessments and certifications, including the bronze medal from EcoVadis and the SA8000 label.

The power produced by the solar installation equals the average yearly **consumption of 357 households** in France

The power produced by the installation **saves 92 tonnes of CO2e** emissions yearly compared to the same amount of power from the grid

“ We are delighted to make a concrete contribution to the decarbonization strategy of a major healthcare player. ”

— Gilles Lemagnen, Country Manager France

About GoodWe

Established in 2010, GoodWe is a world-leading inverter manufacturer and smart energy solution provider. As of Q1 2025, GoodWe has achieved over 100 GW of global installations. The company offers an extensive range of products and solutions tailored for residential, commercial and industrial, and utility-scale sectors, delivering efficiency, safety, and long-term value. The manufacturer practices environmental and social responsibility throughout the lifetime of their products, constantly progressing and reporting on their ESG goals through annual Sustainability Reports and independent certifications. GoodWe has around 5,000 employees worldwide, with over 1,000 dedicated to research and development. For the second quarter of 2025, GoodWe has been named as a Global Tier 1 Power Inverter Manufacturer by BloombergNEF (BNEF). For more information, please visit <https://emea.goodwe.com/>.
